PROJECTS

RwarriMS — *An Employee Management System*

RwarriMS, originally built for RWARRI, is an Employee Management System to keep track of their Employees, it enables application and management of leaves, payment requests and other E-Payment and E-Performance tasks, check-in at work, track daily tasks and so much more on any platform. Built with NextJS and Typescript and Javascript. *Uses MongoDB as a Database.*

Rabbet – *A service to build a page for your links.*

Rabbet, is a website that allows you to make simple pages for your links. It allows you to create simple pages that show links together with a title and some text. *Runs on Firebase and NextJS. Currently rewriting it using the Fresh framework (Deno).*

Explosiv — A static JSX site generator

Explosiv, is a static site generator for JSX content. It was built to allow small sites (or even large ones) to generate their HTML easily and fast while preserving some React-like syntax (JSX). *Written in Vanilla Javascript in NodeJS.*

vixalien.io— *A personal blog*

vixalien.io or simply **dotio**, is my personal website, a collection of posts and my projects. Has been rewritten many times using various tech stacks. *Runs on Deno.*

A list of my other public projects are at Github
